What problem am I solving?

- Why am I not making or using any other app
- Cars are empty anyways, socialize, earn money, **always interesting idea for ride sharing.**
- Focus on problem.

Add more info after lo-fi

- Do you want to be a rider > driver welcome etc.
- 2 separate buttons

Google Api - 28,500 map loads per month for no charge

Trade show ready

How many drivers do we have (Put a large database of drivers so that when a rider requests a ride then they can see many drivers)

The app should be very easy to use

Algorithm for Pricing

- **Pricing model is needed (based on distance and time)**

The rider can put time and select

- Select location (drop off, pick up)
- Time (+/- 5 mins example – If the rider can wait 5 mins from the given time frame or can ride earlier than the provided time)

This is why we want to make our app Cuz we can't solve this issue with the existing apps on the market. Think how are you going to make money from this

User needs to specify

- Location (drop off , pickup)
- Time frame
- > search the drivers
- > Match drivers
- >Choose drivers

Separate screen for driver to

- >upload route/ Find passenger
- > upload route > start point > end point > time > how much detour
- > Find passenger > close to my route

MVP

Driver can upload route

Ride and pick driver

Payment credit cards etc.

Wallet later

Payment for driver how much is customer going to pay and how much is driver going to be paid.
