Project background & business need/opportunity

- The goal is to address the concern of commuting to and from the university of Regina. As we know there are a large number of students and faculty who depend on public transport for their commute. Using public transport can be very time consuming. In addition to this, there are also some other challenges such as unreliability due to weather conditions, rush hour congestion, and long waiting times in Saskatchewan winters.
- To address these challenges, we plan to develop a web application which will provide the university faculty and students with the opportunity to share the commute with other users, and thus, lessen their carbon footprint.
- How this will work, is that someone with access to a vehicle, can provide the option of ride share with someone who lacks the access, while simultaneously get the opportunity to make a small earning through the rider.

Status description

- Yellow: Slightly off track
 - Re-structure the website.
 - Reiterate pages and concept
 - Changes upon talking to mentor
 - Have lofi ready but still feel a need to explore more and make changes before moving further.

Changes Going Forward

- Have a Dynamic User Login
- Display all available drivers in the city for a given time.
- One way confirmation for the rides
- External communication between driver and rider.
- Pricing and Business Model
